Whispers in the Pixels: A Steganographic Odyssey

Abstract :

n an era where digital privacy is increasingly compromised, "Whispers in the Pixels" explores the subtle art of steganography, where messages are hidden within the very fabric of images. This project delves into a novel approach for encoding secret communications into pixel data, transforming images into enigmatic carriers of information. By leveraging the least significant bit manipulation, we create a seamless integration of text into images, ensuring that the hidden messages remain imperceptible to the naked eye. This journey navigates the intricacies of binary encoding, the ethical considerations of digital secrecy, and the potential applications of such techniques in Cyber security and digital art. Join us in uncovering the hidden narratives that lie dormant within our visual landscape, revealing the untold stories that pixels can convey.
